

Major Evaluation II

Q: Given a string, that contains special characters together with alphabets ('a' to 'z' and 'A' to 'Z'), reverse the string in a way that special characters are not affected. Treat all letters other than numbers (1-9) and characters (A-Z & a-z) as special characters.

Example 1:

Input: str = "a,b\$c"

Output: str = "c,b\$a"

Note that \$ and , are not moved anywhere.

Only subsequence "abc" is reversed

Example 2:

Input: str = "Ab,c,de!\$"

Output: str = "ed,c,bA!\$"
